Expanding hold-open systems – convenient wireless operation

To offer greater safety and convenience, GEZE has made its range of hold-open systems even more appealing with a special solution. The components of the new GEZE FA GC 170 wireless extension kit can be easily connected to existing systems via a wireless module. The new solution has already been recognised at the German Design Award and the ICONIC AWARDS.

No structural changes – optimal solution for retro-fitting

Installing the FA GC 170 wireless extension kit requires no additional cables to be hooked up to ceiling-mounted detectors and manual trigger switches: this is a real advantage where structural modifications are undesirable or impossible, e.g. in listed buildings. The system also makes it easy to retro-fit ceiling-mounted detectors on existing hold-open systems. The new solution ensures safe preventive fire protection and complies with all relevant regulations.

Fast and simple connection – low maintenance

All components of the wireless extension are connected via a DIP switch. The wireless module at the heart of the wireless system enables wireless communication between the virtually invisible lintel-mounted smoke detector, integrated into the guide rail, and the various wireless devices, e.g. the wireless ceiling-mounted smoke detector and wireless ceiling-mounted thermal detector as well as the wireless module to the manual trigger switch.

The flexible system design allows up to six wireless devices to be connected, so even ceilings with unique structural features can be equipped. The FA GC 170 wireless extension system can be used with all GEZE hold-open systems and is tested in accordance with DIN EN 54-25. The long battery life of five years reduces maintenance costs.

PRESS RELEASE

11.12.2018

Already a double award-winner

2 | 2

The German Design Award is all about design quality. The expert jury recognised the new GEZE FA GC 170 wireless extension for hold-open systems with a 'special mention' in the 'Building & Elements' category. This title recognises projects with a design that uses highly successful aspects or solutions.

The ICONIC AWARDS: Innovative Architecture is the first international architecture and design competition that considers the interactions between disciplines. It draws attention to the basic importance of how individual product groups work together and awards exceptional construction projects and innovative interior and product design in the context of architecture. FA GC 170 received the 'Selection' award in the 'Product' category.

GEZE – ABOUT US

We are an innovative global company for products, system solutions and comprehensive service for doors and windows. We offer innovative and highly modern door, window and safety technology and apply our industry and professional expertise to achieve outstanding results for our customers.

GEZE employs over 3,140 people worldwide. We develop and manufacture products at our headquarters in Leonberg, and also have manufacturing locations in China, Serbia, and Spain. With 32 subsidiaries all over the world, we offer maximum customer proximity and outstanding service anywhere. We have six branch offices in Germany and our group revenue is in excess of 430.4 million euro.
